ESP Granulators

Conventional granulators have substantial problems handling long pipes and profiles. In most cases, cavities or platforms are needed to feed large and bulky materials. Because of this, EconoGrind developed the ESP Series.

With a nearly level feed hopper, long pieces can be fed easily and because the machine is able to control the feed rate, there is no risk of blockage.

Standard Feed

Extended Feed

In the event of a full grinding chamber, material feed will be halted and work can go on without any problems.

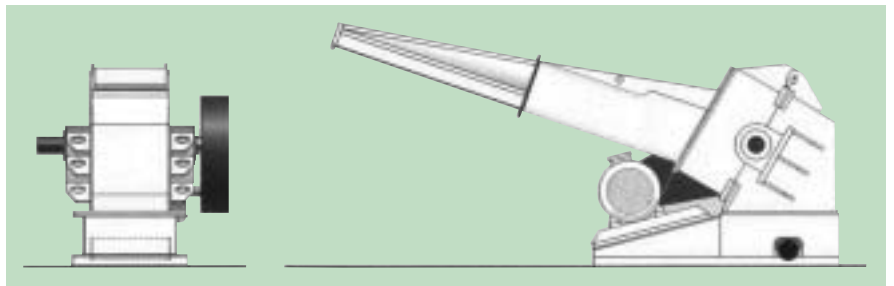

The ESP Series is based on the latest machine concepts, which have been perfect-ed throughout the years and leave nothing lacking. The machines, which are of a robust, welded steel construction, are suitable to meet the most demanding applications.

Benefits:

- Ergonomical feeding
- Superior cutting action
- Simple knife setting
- Well thought-out housing design
- Robust bearing assembly
- High operational reliability

Models:

- ESP 600/500, ESP 560/700

Equipment Sales

EconoGrind USA
300 Turner Street
South Attleboro, MA 02703-7900
